ABOUT US

**“ We work to offer farmers
and distributors a better,
more competitive, and profitable
future, improving their crop yields
and ensuring the supply of all the
products they need”**

FERTINAGRO BIOTECH

Thanks to our strong commitment to research and product innovation, we have become the leading reference in Spain's technological and sustainable fertilizer sector.

Fertinagro Biotech is the head of the **Plant Nutrition Division of Tervalis Group**, a business group dependent on the holding company Inversalia Patrimonio, which operates in the agri-food, renewable energy and tourism sectors.

For over 40 years we have been working to achieve **the most competitive, valuable and sustainable agriculture** in the world, with a dynamic policy of industrial growth and a strong commitment to research, which has allowed us to adapt to the new needs of farmers and markets.

But this has not been an easy road, which is why we chose the best travel companion to share our vision of the future with: the **OCP Group**, the world's largest manufacturer of phosphate products. This and other **alliances with international producers**, as well as our subsidiaries specialized in logistics and trading, combine with enormous productive and innovative potential to offer our customers around the world the **most complete catalogue of nutritional solutions at the most competitive prices**.

▼ Watch corporate video
of Fertinagro Biotech

Some facts about our company

Spain's leading company in the industry

- A leading brand in the manufacture of technological plant nutritional products
- Long track record with 40 years of experience
- More than 100,000 farmers already trust our products
- We manufacture tailor made products for major distributors

The most complete offer

- More than 800 references of sustainable nutritional products
- From traditional to high-tech products
- Team of 300 agricultural technical experts working with farmers

Focused on innovation

- An annual investment of 5 million euros in R&D.
- Collaboration with 56 official research centres in Spain
- 172 national and international technological patents
- The largest agrotechnology laboratory in Europe
- We are the only European producer with two proprietary urease inhibitors that are registered, certified, and approved by the European Union

Large industrial capacity

- 28 production plants located in 16 large production centers
- Production capacity of more than 2 million tons/year
- Europe's largest biofertilizer plant

Sustainable agriculture

- Increased yields with fewer fertilizer units applied
- Reducing the CO₂ footprint with technologically sustainable solutions
- Optimizing resources by promoting a circular economy

Fertinagro in the world

- 22 international subsidiaries with presence in 90 countries around the world
- Priority partner of the OCP Group (20% of Fertinagro Biotech shares)
- More than 300,000 tons exported each year

PROFITABLE AND SUSTAINABLE DEVELOPMENTS

INDUSTRIAL CAPACITY

We manufacture over 2 million tons of fertilizers annually, maintaining rigorous control throughout the entire production chain and ensuring maximum traceability from raw materials to final products

Our key strength lies in our industrial capacity: **28 production plants across 16 major plant nutrition centers and one animal nutrition center** in Spain, France, and Morocco. These facilities operate to the highest quality standards and with strong environmental responsibility, supported by a robust logistics network designed to meet the needs of Fertinagro's diverse sales teams.

Furthermore, recognizing that the future of plant nutrition lies in microbiological innovation, we operate **one of the largest specialty product plants in Europe**, featuring dedicated lines for the development of biotechnological solutions aimed at revolutionizing fertilization systems.

From the most conventional to the most advanced fertilizers, our diversified production combined with a strong commitment to innovation has enabled us to offer a **highly competitive catalogue of over 800 nutritional products**, developed to meet the needs of any crop at every stage of its growth.

INTERNATIONAL PRESENCE

We are currently present in 90 countries, exporting our technologies tailored to the unique conditions of each territory and crop.

Fertinagro Biotech's business vision has driven our continuous international growth, achieved through strategic alliances and our **22 subsidiaries across multiple continents**.

Additionally, our technical and commercial teams, spread across various regions, **tailor our product catalogue to meet the specific needs of each crop and country**. We actively identify market demands and collaborate with our R&D department to develop targeted solutions.

AT THE FOREFRONT OF INNOVATION

Research, development, and innovation drive our growth and are at the core of everything we do. This commitment will always be our key differentiator in the market.

For nearly four decades, our primary goal has been to stay one step ahead—exploring new avenues, driving innovation, and differentiating ourselves. **Research, development, and innovation are not just priorities; they are our commitment to the future.** This commitment aims to address the key challenges facing the agri-food sector, and by extension, society as a whole.

Thanks to substantial annual investment in research and the expertise of our R&D team, Fertinagro Biotech proudly holds over **170 technological patents registered both nationally and internationally.** We remain committed to developing key projects that help farmers adapt to evolving regulatory.

These projects focus on **developing new products and processes that minimize the use of economic resources in agriculture,** with particular emphasis on creating efficient fertilizers that boost crop yields using renewable resources.

**Data sourced from the 2022 resolution of the Public-Private Collaboration Aid Program.*

Our R&D figures

■ A leader in agrifood research in Spain

contributing nearly 50% of the sector's total R&D investment.

■ 5 million euros

annual investment in R&D&I.

■ 375,854 hours dedicated to research

over the last decade.

■ 214 collaborations

with various universities and affiliated institutions, including 121 research centers.

■ 28 projects

certified by the CDTI (Center for the Development of Industrial Technology) over the past 15 years.

■ 41 researchers

dedicated to developing new products.

■ 172 patents

registered in 27 countries.

■ 4 University Chairs

in Valencia, Zaragoza, Huelva, and Madrid.

The most advanced laboratories in the sector

Our ongoing commitment to research has positioned us at the forefront of innovation, with the most comprehensive and advanced **agronomic and biotechnological laboratories** in the industry where the fertilizers of the future are being developed.

Our R&D testing is centralized at **C.I.B.A.**, located in Utrillas, Spain, where we operate both a physico-chemical analysis **lab** and a **molecular biology lab**. The latest technological additions to these facilities

mark a significant advancement in the field of biotechnology. At C.I.B.A., we conduct **metagenomic studies** that allow us to sequence the genomes of soil microorganisms, providing detailed insights into their microbiological composition

We also operate a **plant physiology laboratory** and utilize **NIRS technology** at our facility in Teruel, Spain, for the characterization of raw materials and mineral fertilizers.

C.I.B.A: Europe's largest agro-technology laboratory

At the C.I.B.A in Utrillas (Spain) we have a production capacity of 10,000 litres using aseptic fermentation, a metagenomics, transcriptomics and metabolomics laboratory, to provide personalised bioproduct production services.

We develop biotechnological processes for the manufacturing of metabolites, enzymes, biopolymers and different microbial products.

We conduct omics analyses to study phytobiomes, as well as the proteomics and metabolomics of soils, plants, water, and other natural resources.

We analyze the metagenomics of soils, plants, water, and both animal and vegetable by-products.

Nutritional technologies

We currently employ a wide range of technologies designed to enhance soil fertility, improve the nutritional efficiency of our fertilizers, and increase crop yields for our farmers, all with sustainability and profitability at the forefront. Among the most commonly used in our formulations are the following:

■ AZO-N® Technology

This technology enriches the product with a range of probiotic and prebiotic biological resources that activate and proliferate beneficial microorganisms in soil and plants, such as *Azotobacter*, *Pseudomonas*, and *Bacillus*. It enables more complete nutrition by facilitating atmospheric nitrogen fixation and enhancing the solubilization and mobilization of phosphorus and potassium that are otherwise unavailable in the soil.

■ ACTIBIÓN® Complex

It stimulates the production of phytohormones that enhance the vegetative development of the crop, while ensuring the solubility of nutrients to maximize the product's effectiveness.

■ AMINOVIT® Complex

Bioactive molecules of organic and natural origin that positively influence the rhizosphere by enhancing metabolism, activating microbial flora, and increasing the labile organic fraction and humic substance content. Additionally, these molecules stimulate the plant's physiological processes, improving its resilience to stress conditions.

■ AMINOBIÓN® Technology

Organic substances, amino acids, and specific micronutrients that enhance soil-plant processes, activate beneficial soil microbiota, and increase nutrient uptake and assimilation. These elements biostimulate the plant, supporting its physiological processes and improving its resilience to stress conditions.

■ PROLIFE® Complex

Composed of complexed essential microelements, it influences the soil microbiome to maximize its potential fertility. It works by nourishing and activating the microorganisms in the rhizosphere to increase the availability of native nutrients naturally present in the soil and atmosphere.

■ FILOAMIN® Complex

It stimulates phytohormone production, enhancing the vegetative development of the crop and ensuring nutrient solubility for maximum product efficiency.

■ DURAMON® Technology

MCDHS inhibitor that targets the urease enzyme, slowing the conversion of urea into ammonia and extending the period of nitrogen availability. This gradual release of nitrogen units enhances their availability while reducing losses due to volatilization and leaching.

■ NOVOPHOS® - PLB Technology

By combining three types of technological phosphorus with traditional phosphorus, this technology provides four speeds of availability to meet the plant's phosphorus needs at different stages of its development. It also prevents phosphorus blockages and retrogradation in the soil.

■ N-PRIMER® Technology

Natural inhibition through the addition of *Metchnikowia Pulcherrima* extract, which combines two key mechanisms in a single technological complex to enhance nitrogen fertilization. It retains nitrogen in the soil, preventing volatilization and ensuring maximum utilization. Additionally, its biostimulant properties improve nutrient absorption and promote overall crop development and productivity.

■ OLIGOQUEL® Complex

The complexation of microelements with amino acids forms aminoates, ensuring nutrient mobility and enhancing their corrective effectiveness in both foliar and root applications.

CONTRIBUTING TO A MORE SUSTAINABLE AGRICULTURE

We are dedicated to environmental and economic sustainability. With the highest respect for the environment, we focus on transforming natural resources and industrial processes to enhance the profitability and performance of our products.

Our group is at the forefront of **driving the agricultural sector toward sustainability**. We achieve this with efficient products derived from renewable resources and developed with respect for the environment, through advanced research and biotechnology. Our technological solutions—activating, regulating, enhancing, and protective in nature—are of organic, biological, chemical, and mineral origin. They act on every nutrient included in our formulations, as well as those naturally present in the soil.

All of Fertinagro Biotech's products and services are designed to **promote solutions grounded in the bioeconomy**. As a leader in the development of technological and sustainable fertilizers, we have the resources and expertise to support farmers in navigating new regulatory frameworks related to vulnerable areas and sustainable nutrient management.

Moreover, beyond the products we bring to market, **we uphold a company-wide internal policy that is fully committed to sustainable development**. We align with key European initiatives such as the Green Deal and Farm to Fork strategy, as well as the goal of achieving decarbonization by 2050. **Currently, 30% of our energy consumption comes from renewable sources**. Additionally, we have integrated the United Nations Sustainable Development Goals (SDGs) into our core business strategy.

Our Sustainability Policy

■ Efficiency

- More with Less. Our production strategy focuses on maximizing the efficiency of the nutrients in our products, allowing farmers to use fewer fertilizer units while achieving optimal results.
- Energy efficiency. Implementation plan for energy efficiency systems with ISO 50.001 certification.
- Reduction of the water and carbon footprint.

■ Circularity

- Strong commitment to renewable raw materials — with some facilities already reaching up to 60% renewable material usage.
- Dedicated to circular raw materials, currently accounting for 25% of total inputs.
- Circular production processes implemented across all facilities, with a clear goal of decarbonization.
- Active participation in AEVAE and SDDR packaging.

■ Safety & Security

- We continuously implement the necessary measures to move toward becoming a 100% safe workplace.
- PRYMOR Plan: Focused on risk prevention and organizational improvement.
- Excellence Plan: Ensures top-tier standards in health and safety.
- Fertilud Plan: Aims to create the safest and most ergonomic work environments possible.

THE MOST COMPREHENSIVE NUTRITIONAL CATALOGUE ON THE MARKET

We offer the most comprehensive and diversified catalog of technological and sustainable products on the market designed to meet a wide range of application methods and the evolving nutritional needs of modern agriculture.

At Fertinagro Biotech, **we are farmers first and experts in plant nutrition**, our core business. That's why we offer farmers, cooperatives, and distributors worldwide the **most comprehensive and cost-effective range of fertilization solutions on the market**. From conventional products to cutting-edge technologies, our portfolio supports every stage of the crop cycle from sowing to harvest.

A broad and continuously evolving catalog with over **800 product references**, tailored to various application methods, crop nutritional needs, and the specific soil and climate conditions of the regions where we operate commercially.

We offer a comprehensive range of fertilizers and crop nutrition products, including granulated fertilizers with various particle sizes, premium organic fertilizers, liquid solutions, and water-soluble fertilizers for fertigation and foliar application. Our portfolio also includes nutritional correctors for all types of deficiencies, biocontrol products for pest and disease management, and a wide selection of high-value biostimulants our area of specialty. Most of our products, including many certified organic options, are enhanced with **patented and certified technologies** that maximize nutrient efficiency and deliver superior agronomic performance.

A Wide Range of Solutions for Every Agricultural Need

Granular and microgranular

NPK and nitrogen-based mineral fertilizers, available in a variety of particle sizes to suit different application needs.

Organic

Fertilizers and natural fertility enhancers, available in both powder and pellet form, derived from 100% natural sources.

Fertigation solutions

Liquid and water-soluble products designed for efficient application through irrigation systems.

Soil Conditioners

Soil enhancers that improve the physical, chemical, and biological properties of the soil.

Correctors

Micronutrients designed to address both general and specific deficiencies in plants.

Biostimulants

Comprehensive biostimulation for both soil and plants, suitable for foliar or root application.

Biocontrol

Ecological solutions for the prevention and treatment of plant diseases.

Organic Farmers & Growers

Certified and registered products for use in Organic Farming.

AGRISTART MICRO

WITH DURAMON AND ACTIBION

High-efficiency micro-granular fertilizers for ultra-localized application in the rhizosphere during sowing.

Promotes uniform and vigorous emergence, increasing the number of viable plants by 5–8%, depending on the sowing rate.

Thanks to its incorporated technology, it enhances root development during the early stages of seedling growth across all crop types.

Its technological formulation and top-quality raw materials improve soil fertility and enhance nutrient efficiency.

The addition of amino acids reduces the energy the plant expends during stressful conditions, promoting earlier crop development.

The efficiency of ultra-localized placement near the seed allows for reduced application rates, delivering the same performance with lower environmental impact.

Combining sowing and fertilization in a single pass reduces operating costs, boosts productivity, and lowers CO₂ emissions.

about the product

DURAMON

1ST EUROPEAN UREASE INHIBITOR

DURAMON® technology **regulates the urease enzyme, slowing the transformation of urea nitrogen into ammonia.** This promotes a balanced distribution of nitrogen in the soil's accessible zone, **minimizing nitrogen losses** and aligning nitrogen availability with the crop's needs.

With DURAMON® technology, **urea nitrogen losses to the atmosphere as ammonia can be reduced by 15% to 40%.**

DURAMON® **ensures efficiency, profitability, and sustainability.**

EFFECT 1

REGULATED DOSAGE

Deliver nitrogen in the optimal amount as the plant requires it.

EFFECT 2

LONG-LASTING NUTRITION

It slows the transformation of urea into ammonia, extending the availability of nitrogen.

EFFECT 3

LOSS REDUCTION

It regulates nitrogen availability in smaller doses to ensure efficient assimilation by the crop and minimize volatilization.

EFFECT 4

ENVIRONMENTAL RESPECT

It reduces ammonia emissions into the atmosphere while providing efficient nitrogen nutrition that is 100% nitrate-free.

DURAMON® (MCDHS) IS THE FIRST UREASE INHIBITOR CERTIFIED IN EUROPE BY REGULATION (EU) 2019/1009, BASED ON ITS INHIBITION EFFICIENCY AND AGRONOMIC RESULTS.

DURASOP TECH

WITH DURAMON

Advanced technological fertilizers formulated with potassium sulphate for the most demanding crops.

Promotes improved root development during early stages of seedling growth in all types of herbaceous and woody crops.

Ensures maximum nutritional benefit thanks to increased availability of both applied and soil-present nutrients.

Helps protect crops from yield loss by enhancing resilience to stress factors.

Enhances crop productivity with minimal environmental impact.

Main formulas

WITH DURAMON

Innovative and sustainable nitrogen fertilizers featuring stabilized nitrogen, along with sulfur, magnesium, and zinc.

Provides a slow-release nitrogen formula, minimizing losses and meeting high demand throughout the crop cycle.

Ensures maximum nutritional benefit by enhancing the availability of both applied nutrients and those naturally present in the soil.

Helps protect crops from yield loss by enhancing resilience to stress factors.

Enhances crop productivity with minimal environmental impact.

Main formulas

24-0-0

N (Mg-S) 24-0-0 (2-26) with zinc

30-0-0

N (Mg-S) 30-0-0 (2-15) with zinc

*Contains Urease Inhibitor (MCDHS) %MCDHS/Urea N: 1%.

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag
●	●	●	●	●

Recommended doses

CROPS	DOSE
Cereals	150-300 kg/ha
Vegetables	300-700 kg/ha
Potato	300-600 kg/ha
Sugarcane	200-400 kg/ha
Corn	200-500 kg/ha

More information
about the product

CALCIPHAN NEUTRALIZANTE

Acid-neutralizing limestone amendment,
long-lasting and environmentally friendly.

soil

fertigation

foliar

It guarantees maximum nutritional value thanks to greater availability of the elements supplied and present in the soil.

It improves soil structure and porosity, ensuring water retention, aeration, and facilitating root penetration.

It provides rapid, long-lasting acid-neutralizing action.

Declared content (w/w)

Total calcium oxide (CaO) **40%**, Total magnesium oxide (MgO) **4%**,
Neutralizing value **40%**.

Packaging

30kg	50Kg	Big Bag
●	●	●

Recommended doses

CROPS	DOSE
Cereals	400-800 kg/ha
Vegetables	400-800 kg/ha

Indicative dose that depends on the pH of the soil in which it is to be applied.

NOVOPHOS-PLB

THE SMARTEST PHOSPHORUS

Thanks to the combination of **three types of advanced phosphors**, along with traditional phosphors, NOVOPHOS®-PLB provides **four rates of nutrient availability** that meet the plant's real-time demands throughout all phenological stages.

NOVOPHOS®-PLB works naturally within the soil-plant system, harnessing all available mineral and biological resources involved in the phosphorus cycle. This ensures maximum phosphorus availability while minimizing CO2 losses and emissions.

NOVOPHOS® - PLB is the first phosphate technology on the market that provides crops with **adequate, balanced, and sustainable phosphate nutrition** throughout their entire development.

start-up phase

TRADITIONAL APPLICATION

PHOSPHORUS 100% SOLUBLE

Phosphorus soluble in neutral ammonium citrate and water in the optimal dosage.

Establishment phase

TECHNOLOGY 1

PROTECTED SOLUBLE PHOSPHORUS

Phosphorus protection through the use of selected organic complexes.

Growth phase

TECHNOLOGY 2

GRADUAL PHOSPHORUS RELEASE

Gradual activation of phosphorus through specific root exudates.

reproductive phase

TECHNOLOGY 3

MICROBIOLOGICALLY SOLUBILIZED PHOSPHORUS

Phosphorus transformation through the action of soil microorganisms, increasing phosphorus availability for the plant.

PROPRIETARY TECHNOLOGY AWARDED BY THE UNITED STATES DEPARTMENT OF AGRICULTURE (USDA) AND THE ENVIRONMENTAL PROTECTION AGENCY (EPA) AS A NEXT-GENERATION FERTILIZER DESIGNED TO PROMOTE AGRICULTURAL SUSTAINABILITY.

United States
Department of
Agriculture

MULTIPHOS TECH

WITH NOVOPHOS-PLB

Specialized fertilizers with high phosphorus content, ideal for acidic soils.

Promotes root development and the formation of secondary roots, enhancing nutrient absorption and offering protection against stress.

Provides complexed phosphorus that is more available, efficient, and easily utilized by the crop throughout all its development stages.

The addition of calcium, sulfur, and zinc results in more resilient crops with improved yield potential.

A product based on circular bioeconomy principles, offering maximum environmental sustainability.

Main formulas

0-25-0

P (Ca-Mg-S) 25 (20-3-10) with zinc

0-35-0

P (Ca-S) 35 (30-5) with zinc

10-25-0

NP (Ca-Mg-S) 10-25 (25-2-6) with micronutrients

2-20-0

NP (Ca-Mg-S) 2-20 (14-1-5) with zinc

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag
●	●	●	●	●

Recommended doses

EFISOIL DURA-U

WITH DURAMON

Nutritional enhancer with stabilized nitrogen, designed to enrich mixtures with nitrogen fertilizers.

It provides a slow-release nitrogen formula with Duramón® technology, ensuring an optimal nutrient supply that adapts to crop needs and environmental conditions.

It enhances crop nutrition by supplying sulfur, magnesium, and essential micronutrients, boosting both quality and yield.

Nutrient losses are minimized by reducing leaching and volatilization, making fertilization more efficient and environmentally sustainable.

Reduced urea consumption is achieved through enhanced efficiency, lowering the total amount of fertilizer required while maintaining optimal crop performance.

Declared content (w/w)

Total Nitrogen (N) **6%**, Ammoniacal Nitrogen (N) **1.2%**, Urea Nitrogen (N) **4.8%**, Total Calcium Oxide (CaO) **4%**, Calcium Oxide (CaO) soluble in water **2%**, Total Magnesium Oxide (MgO) **14%**, Magnesium Oxide (MgO) soluble in water **10%**, Sulfur Trioxide (SO₃) soluble in water **35%**, Total Manganese (Mn) **0.1%**, Total Zinc (Zn) **0.1%**.

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag
●	●	●	●	●

Dosage and method of use

Mix DURA-U with standard nitrogen fertilizers using mechanical systems. The application rate will depend on the specific needs of the crop, expected yield, and the type of fertilizer with which the product is applied.

MIXING WITH UREA: Use in variable ratios (for example):

1 part DURA-U with 6 parts urea

● + ●●●●●● 15%

1 part DURA-U with 3 parts urea

● + ●●● 25%

DURA-U is suitable for mixing with any nitrogen-based fertilizer, as well as with phosphate (DAP) and potassium fertilizers.

▼
More information
about the product

EFISOIL DURA-P

WITH ACTIBIÓN

Nutritional enhancer for conventional phosphate fertilizers with phosphorus protection.

soil

fertigation

foliar

Incorporates humic substances to stabilize phosphorus in the fertilizer, reducing retrogradation and enhancing its uptake by plants.

Stimulates root development through the Actibion® complex, which contains thioesters that promote stronger root growth and improved nutrient translocation.

Contains lignosulfonate-chelated micronutrients for enhanced nutrient efficiency and consistent availability throughout plant development.

Enhances and optimizes the nutrient balance of the final mixture with phosphate fertilizers.

Declared content (w/w)

Calcium Oxide (CaO) **2%**, Magnesium Oxide (MgO) soluble in water **10%**, Sulfur Trioxide (SO₃) soluble in water **25%**, Total Boron (B) **0.1%**, Total Zinc (Zn) **0.1%**.

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag
●	●	●	●	●

Dosage and method of use

Mix DURA-P with conventional phosphate fertilizers using mechanical systems. The application rate will depend on the specific needs of the crop, the expected yield, and the type of fertilizer with which the product is applied.

MIXING WITH DAP / MAP: Use in variable ratios (for example):

20% Dura-P + 80% MAP/DAP

30% Dura-P + 70% MAP/DAP

More information
about the product

EFISOIL DURABLEND

WITH PROTECT

Granular technological complex designed to enhance the efficiency of conventional formulations, whether complex fertilizers or raw materials.

Improves nutritional efficiency by complementing the balance of the original source with which it is mixed, enhancing the availability and mobility of nutrients.

Improves nutrient absorption by minimizing losses due to immobilization and insolubility.

Its application is versatile, adapting to various agricultural formulations, whether complex fertilizers or raw materials, enhancing the efficiency of the mixtures used.

Optimizes fertilization costs by reducing the amount of product required to achieve the same yield, maximizing investment in agricultural inputs.

Main formulas

DURABLEND Ca
Ca-Mg (40-4)

DURABLEND Mg
Mg-S (16-35)

DURABLEND Zn-B
Ca-Mg-S (25-4-40) with boron and zinc

DURABLEND 5e
Mg-S (10-28) with boron, manganese and zinc

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag
●	●	●	●	●

Recommended doses

It is recommended to mix homogeneously with the products to be complemented, the mixing percentages will be adapted depending on the product to be improved and the characteristics of the soils where the resulting formula will be used. **The product can be used in a mixture or applied directly in the field.**

▼
More information
about the product

EFISOIL BLENDCOAT

WITH ACTIBIÓN

Coating for physical mixtures that protects, homogenizes, and preserves the quality of the final blend.

soil

fertigation

foliar

Anti-dust and anti-caking technology, along with its black color, which helps homogenize the final product.

The phosphorus stabilization technology improves nutrient availability by reducing retrogradation.

The humic extract enhances soil structure, promoting better root development and overall plant health.

Declared content (w/w)

Total Humic Extract **40%**, Humic acids **5%**, Fulvic acids **35%**, Potassium oxide (K_2O) soluble in water **15%**.

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag
●	●	●	●	●

Recommended doses

Preparation: Dilute Blendcoat in water at a rate of 10% (example 5 Kg Blendcoat in 50L water).

Application dose: Spray 3-5 L of the solution Blendcoat per ton of final fertilizer mix.

More information
about the product

FERCRISTAL SUMMUM

WITH AMINOBIÓN

Premium complete NPK water-soluble fertilizer with enhanced efficiency, featuring specific biostimulants, protected microelements, and tricarboxylic acids.

The biostimulant contribution protects and enhances the efficiency of the supplied nutrients.

Formulated to enhance the plant's metabolic processes, supplying energy and reducing nutrient requirements.

Microbial soil stimulation that enhances root development and capacity, resulting in improved water and nutrient absorption.

The raw materials and manufacturing technologies utilized reduce salinity in the root zone, enhancing crop yields and reducing water demand.

Main formulas

18-5-5

NPK (S) 18-5-5 (51) with micronutrients

15-15-15

NPK (S) 15-15-15 (26.2) with micronutrients

More information
about the product

FERCRISTAL KALIPHOS

Water-soluble fertilizer with a high phosphorus and potassium content (PK 0-40-40).

Enhances nutrient availability in the soil and uptake by the plant through rhizosphere acidification.

Compared to other potassium sources, Kaliphos helps limit the increase in electrical conductivity in the fertigation solution.

Acidifying effect that, due to its acidic reaction, prevents clogging in drippers and irrigation lines.

Anti-caking properties with high water and moisture retention capacity, maintaining flowability without compaction, an asset in industrial applications.

Declared content (w/w)

Phosphorus Pentoxide (P_2O_5) soluble in water **40%**, Phosphorus Pentoxide (P_2O_5) soluble in neutral ammonium citrate and water **40%**, Potassium Oxide (K_2O) soluble in water **40%**.

Packaging

5 Kg	20 Kg	25 Kg	50 Kg	Big Bag

F. RENOVATION FUERZA MÁXIMA SOLUBLE

FORMULATED WITH SUPERBIA*
WITH AMINOBIÓN

Technologically advanced water-soluble NPK biostimulants, enriched with protected microelements and enhanced with specific amino acids and tricarboxylic acids.

The incorporation of AMINOBIÓN® technology enhances nutrient efficiency and stability, improving plant uptake and overall formulation performance.

Supports and optimizes the plant's metabolic and physiological processes, improving nutrient use efficiency and reducing overall nutritional requirements

Microbial stimulation of the soil that enhances root development and capacity, resulting in improved water and nutrient absorption by the crop.

The raw materials and manufacturing technologies utilized reduce salinity in the root zone, enhancing crop yields and reducing water demand.

The inclusion of stabilizers with a buffering effect prevents extreme pH fluctuations in the root zone, mitigating the risk of toxicity.

Enhances crop fortification and strengthens resistance mechanisms against abiotic stresses, including weather fluctuations, salinity, and drought, leading to improved development and yield.

More information
about the product

INFINITE NATURAL NUTRITION

AZO-N® technology offers a unique combination of life-enhancing probiotics and prebiotics, **designed to stimulate soil and plant microorganisms**. This technology promotes the **fixation and solubilization of nutrients naturally present in the environment**, optimizing nutrient availability and supporting plant growth.

Products with AZO-N® technology enable the reduction of mineral fertilizer usage, enhancing the sustainability and efficiency of fertilization practices.

AZO-N® utilizes billions of microorganisms to optimize nutrient cycling and support plant growth, making it a more environmentally responsible choice for agriculture.

EFFECT 1

ACTIVATION OF THE MICROBIOTA

Stimulates and increases the diversity of *Azotobacter*, *Pseudomonas*, and *Bacillus* populations in both the soil and foliar environments, promoting nutrient cycling and improving soil fertility.

EFFECT 2

ATMOSPHERIC NITROGEN FIXATION

Azotobacter naturally fixes and assimilates nitrogen from the atmosphere, enhancing soil fertility and providing essential nutrients to the crop.

EFFECT 3

MOBILIZATION OF BLOCKED P AND K

Pseudomonas and *Bacillus* bacteria unlock and solubilize significant amounts of phosphorus and potassium that are otherwise unavailable in the soil.

EFFECT 4

PROTECTION AGAINST STRESS

Increased biodiversity contributes to the development of suppressive soils, reducing the impact of pests and disease.

AMINOVIT VIGORIÓN

FORMULATED WITH SUPERBIA

Organic physioactivator
that supports crop recovery
after stress events.

AMINOVIT VIGORIÓN AZO-N

WITH AZO-N TECHNOLOGY

It ensures optimal nutrient utilization through foliar fixation of atmospheric nitrogen and the activation of phosphorus and potassium bound in the soil.

It ensures optimal nutrient utilization through foliar fixation of atmospheric nitrogen and the activation of phosphorus and potassium bound in the soil.

It boosts the plant's metabolism, enhancing crop development during biotic or abiotic stress, particularly in stages of high nitrogen demand.

It delivers a wetting and spreading effect that boosts the effectiveness, persistence, and absorption of foliar applications by the plant.

Increases crop resistance to drought, preventing growth interruptions and ensuring higher yields.

It provides a rapid biostimulant energy boost that enhances root and vegetative establishment, promotes overall plant development, and increases both the protein content and quality of the crop.

Declared content (w/w)

Free amino acids **12%**, Total Nitrogen (N) **2.5%**, pH **5.5**, Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val.**

organic
FARMING

It directly enhances soil fertility, boosting both its productivity and that of the crops it nourishes.

Induces rhizospheric processes that promote root formation and stimulate microorganism activity (prebiotic effect).

Enhances the soil's ability to retain nutrients and water, improving their availability.

Enhances the absorption, transport, and mobility of nutrients within the plant.

Main formulas

CALCIUM

NK 4-0-2 liquid with peat

BIO FERRUM *eco*

NK 2-0-6 liquid with iron

BIOLÓGICO *eco*

NK 2-0-4 liquid

about the product

GEPAVIT EXTRAHÚMICO
WITH PROLIFE COMPLEX

Organic-certified humic extracts that improve soil fertility for root application.

Improves soil structure and porosity, promoting water retention, aeration, and facilitating root penetration.

Stimulates beneficial microorganisms in the soil, enhancing fertility and restoring its nutritional potential.

Contains root-stimulating compounds that promote primary and secondary root development, enhancing nutrient and water uptake efficiency.

Declared content (w/w)

Humic extract **25%**, Humic acids **10%**, Fulvic acids **15%**, Water-soluble potassium oxide (K₂O) **6%**, pH **11**.

FOLITOP AMINO

WITH FILOAMIN COMPLEX

Nutritional biostimulants (NP and NPK) low in chloride, enriched with magnesium, microelements chelated by EDTA, and amino acids.

Comprehensive nutritional support with the macro and microelements essential for proper and balanced crop nutrition.

It enhances crop biostimulation by providing a rapid energy supply, ensuring optimal yield and quality

Rapid and complete correction of nutritional deficiency symptoms resulting from shortages of various micro and macronutrients

Thanks to its biostimulant content, it improves the crop's response to any stress situation.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

They contain selected fulvic acids that act as natural antioxidants, protecting the plant from solar radiation.

Main formulas

AMINONITRO

NPK (Mg) 25-5-10 (2) with micronutrients and amino acids

AMINOPHOSZINC

NP 11-57-0 with zinc and amino acids

AMINOKUALIUM

NPK (Mg) 10-5-30 (2) with micronutrients and amino acids

F. RENOVATION FUERZA FOLIAR

Low-chloride NPK fertilizers with sulfur, complexed microelements and amino acids.

Complete nutritional supply of the macro- and microelements required for proper and balanced crop nutrition

Thanks to its biostimulant content, it enhances the crop's response to stress conditions.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

It enhances crop biostimulation by providing a rapid energy supply, ensuring optimal yield and quality.

Main formulas

STARTER

NPK (S) 25-10-10 (17) with micronutrients and amino acids

FINALIZER

NPK (S) 7-10-30 (35,8) with micronutrients and amino acids

COMPLEX

NPK (S) 18-18-18 (13,6) with micronutrients and amino acids

EFIFOL WHITEPOT SOLUTION

Organic-certified liquid potassium solution with strengthening properties that support crop vigor and resilience.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

High potassium and biostimulant content for the final crop stages, ensuring improved fruit sizing, ripening, and firmness.

Formulated with premium, sustainable raw materials and low-chlorine potassium, ensuring minimal environmental impact and maximum agronomic efficiency.

Declared content (w/w)

Potassium oxide (K₂O) total **23%**, Poor in chloride.

EFISOIL BLACKPOT

Super-concentrated water-soluble humic-potassium formulation with a phenological fortifying effect.

The combination of humic extracts and bioactive substances enhances the assimilation and translocation of supplied potassium, while also mobilizing the potassium already present in the soil.

Helps protect crops from yield loss by enhancing resilience to stress factors.

Contains root-stimulating compounds that promote primary and secondary root development, enhancing nutrient and water uptake efficiency.

High potassium and biostimulant content for the final crop stages, ensuring improved fruit sizing, ripening, and firmness.

Declared content (w/w)

Total humic extract **12%**, Humic acids **5%**, Fulvic acids **7%**, Total nitrogen (N) **3%**, Water-soluble potassium oxide (K₂O) **52%**, pH **9**.

EFISOIL SUPERAMINOPOT

WITH PROLIFE COMPLEX

Organic-certified, highly efficient potassium aminosulfate that enhances all physiological processes in plants.

Stimulates beneficial microorganisms in the soil, enhancing fertility and restoring its nutritional potential.

The contribution of specific sulfur-containing amino acids combined with bioactive substances, enhances the assimilation and translocation of potassium and mobilizes the potassium available in the soil.

Helps protect crops from yield loss by enhancing resilience to stress factors.

It provides a quick energy boost that stimulates plant growth and enhances overall development during the crop establishment phase.

A high concentration of easily assimilated potassium boosts both the quantity and, most importantly, the quality of the final harvest.

Declared content (w/w)

Total nitrogen (N) **4%**, Water-soluble potassium oxide (K_2O) **34%**, Free amino acids **20%**, Humic acids **7%**, pH **4**. Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val**.

EFISOIL GERMINADOR AZO-N

WITH AZO-N TECHNOLOGY

Biostimulant that accelerates plant establishment and germination, featuring probiotics for nitrogen fixation and the mobilization of locked phosphorus and potassium.

Regenerates and optimizes the physical, chemical, and biological properties of the crop's root zone throughout the growing cycle.

Increases seed germination capacity, maximizing germination rates and enhancing the crop's productive potential.

Thanks to its biostimulant effect, it ensures improved root development during the early stages of seedling growth.

Helps protect crops from yield loss by enhancing resilience to stress factors.

Its microorganism content improves the utilization of internal reserves, ensuring better emergence and crop establishment.

It provides a quick energy boost that stimulates plant growth and enhances overall development during the crop establishment phase.

Declared content (w/w)

Free amino acids **6.5%**, Total nitrogen (N) **1.5%**, pH **4.5**. Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val.**

NUTRITIONAL CORRECTORS

Nutritional correctors containing calcium, magnesium, iron, boron, copper, zinc, manganese, molybdenum, or a blend of all. These chelated and/or complexed microelements are rapidly assimilated and, in many cases, offer a biostimulant effect. They are formulated to address the specific needs of all types of crops.

Correctors of various micronutrients

Microquel Amin Ziman 	61
Microquel Boromag	62
Microquel Amin B-Mo 	63
Microquel Amin Cuaje	64
Microquel Amin Copper 	65
Microquel Amin Magnum	66
Bioqel Mix 	67
Microquel Multimicro	68
Microquel Amin Supercóctel	69

Calcium correctors

Microquel Amin Durafruit	70
Microquel Amin Topcal	71

Iron correctors

Bioqel Ferrum 	72
Microquel Hierro 	73

MICROQUEL AMIN ZIMAN

WITH OLIGOQUEL COMPLEX

Organic-certified liquid biostimulant containing zinc and manganese for rapid assimilation, enhanced with amino acids.

Enhances the absorption of zinc and manganese, ensuring complete penetration and translocation within the crops.

Thanks to its biostimulant content, it improves the crop's response to any stress situation during the crop cycle.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

The inclusion of complexed zinc and manganese offers both preventive and curative effects for deficiency symptoms.

It promotes biostimulation and enhances crop productivity through a rapid energy supply, leading to improved flowering and fruit setting.

Declared content (w/w)

Free amino acids **8%**, Total Nitrogen (N) **2%**, Water-soluble Manganese (Mn) **4%**, Water-soluble Zinc (Zn) **4%**, pH **4**, Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val.**

MICROQUEL AMIN B-Mo

WITH OLIGOQUEL COMPLEX

Organic-certified liquid biostimulant of boron and molybdenum, rapidly assimilated with amino acids.

Enhances the absorption of boron and molybdenum, ensuring complete penetration and translocation within the crops.

Thanks to its biostimulant content, it improves the crop's response to any stress situation during the crop cycle.

The inclusion of boron and molybdenum offers both preventive and curative effects for deficiency symptoms.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

Boosts crop yields and quality through the rapid absorption and contribution of boron and molybdenum.

Declared content (w/w)

Free amino acids **5%**, Total Nitrogen (N) **4%**, Water-soluble Boron (B) **9%**, Water-soluble Molybdenum (Mo) **0.1%**, pH **7**. Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val.**

MICROQUEL AMIN COPPER

WITH OLIGOQUEL COMPLEX

Organic-certified copper biostimulant
with rapid assimilation,
enhanced with amino acids.

Enhances the absorption of copper, ensuring its complete penetration and translocation within the crops.

Thanks to its biostimulant content, it enhances crop development during any stress situation at all stages of the plant's growth.

The inclusion of copper offers both preventive and curative effects for deficiency symptoms.

Provides a wetting effect that enhances the effectiveness, longevity, and penetration of foliar applications into the plant.

Improves crop yield and quality thanks to the rapid absorption of copper, also causing a positive effect on plant health.

Declared content (p/p)

Free amino acids **5%**, Total Nitrogen (N) **1.2%**, Water-soluble Copper (Cu) **5%**, Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val.**

BIOQEL MIX

WITH OLIGOQUEL COMPLEX

Organic-certified biostimulant corrector with chelated and complexed microelements, offering high efficiency and rapid absorption.

SUITABLE FOR
organic
FARMING

Corrects nutritional deficiencies caused by shortages or limited vascular mobility of one or more micronutrients

Activates beneficial soil microorganisms to boost fertility and enhance crop resilience to all types of stress.

Delivers maximum nutritional efficiency by enhancing photosynthetic activity and expanding leaf surface area for improved energy capture.

Ideal for crops grown in high pH soils and/or hard water situations where micro elements availability is restricted.

EDTA and lignosulfonates shield micronutrients from lockup across a wide pH range (3-10), enhancing their availability and root uptake.

Declared content (w/w)

Water-soluble boron (B) **0.7%**, Water-soluble copper (Cu) **0.5%**, Water-soluble iron (Fe) **7.5%**, Water-soluble manganese (Mn) **3.3%**, Water-soluble molybdenum (Mo) **0.2%**, Water-soluble zinc (Zn) **0.6%**, Stability pH range of the chelated fraction **3-10**, Chelating agent EDTA **30%**, Complexing agent: **Lignosulfonic acid**.

MICROQUEL AMIN SUPERCÓCTEL

WITH OLIGOQUEL COMPLEX

Comprehensive nutrient package: multi-activator, biostimulant, and physiological enhancer.

soil

fertigation

foliar

SUITABLE FOR
DRONE

Its complete blend of elements delivers triple action with protective, corrective, and nutritional effects.

Amino acids enhance the transport of macro, meso, and micronutrients, ensuring better distribution throughout the plant.

It stimulates the soil microbiota and supplies energy, stimulating root development, vegetative growth, and overall crop quality.

Rich in amino acids, this product provides essential microelements that support enzyme activity, enhancing plant performance by optimizing metabolic processes and overall growth.

Helps protect crops from yield loss by enhancing resilience to stress factors.

Declared content (w/w)

Free amino acids **12%**, Total nitrogen (N) **6%**, Water-soluble phosphorus pentoxide (P_2O_5) **18%**, Water-soluble potassium oxide (K_2O) **18%**, Water-soluble boron (B) **0.2%**, Water-soluble copper (Cu) **0.2%**, Water-soluble iron (Fe) **0.65%**, Water-soluble manganese (Mn) **0.5%**, Water-soluble molybdenum (Mo) **0.04%**, Water-soluble zinc (Zn) **0.65%**, Stability pH range of the chelated fraction **4-8**, pH: **5**.

ANTIOX

Reduces natural oxidation in fruit, enhancing fruit firmness, minimizing handling damage, and improving shelf life of the produce.

Enhances the absorption of calcium and zinc, ensuring full penetration and effective translocation throughout the crop.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

The complexed calcium and zinc offer dual action, functioning as both a preventive and corrective treatment for deficiencies of these nutrients.

Thanks to its biostimulant content, it enhances crop development during any stress situation at all stages of the plant's growth.

Calcium and zinc play a crucial role in auxin production, which is essential for promoting fruit firmness and overall plant growth.

Declared content (w/w)

MICROQUEL AMIN TOPCAL

WITH OLIGOQUEL COMPLEX

Bio stimulant with rapidly assimilated calcium and amino acids.

Enhances calcium absorption, ensuring complete penetration and effective translocation throughout the plant.

Thanks to its bio stimulant content, it supports crop development under stress at all growth stages.

Stimulates plant growth and enhances crop performance, leading to improved flowering, fruit set, and ripening.

Calcium complexed with amino acids acts quickly to prevent and correct deficiency symptoms.

Biopolymers and adjuvants increase the wetting power of the solution, improving the efficiency of foliar sprays and phytosanitary treatments.

Improves crop quality and fruit firmness thanks to the highly absorbable calcium in the formulation.

Declared content (p/p)

BIOQEL FERRUM

WITH OLIGOQUEL COMPLEX

Organic-certified biostimulant and corrector with complexed iron, offering high efficiency and rapid absorption

SUITABLE FOR
organic
FARMING

Iron complexed with selected amino acids ensures quick absorption and assimilation by the plant, providing both preventive and corrective treatment for deficiency symptoms.

The amino acids in the formulation form soluble complexes with iron, enhancing its availability for plant uptake.

Ideal for high-pH soils, hard water conditions, and crops with high iron requirements such as fruits, vegetables and ornamentals.

Soil regeneration by activating beneficial microorganisms through the supply of selected amino acids and natural sugars.

It enhances nutrient uptake and supports plant metabolism, both of which are crucial for root development. Iron plays a key role in chlorophyll production and energy transfer within the plant.

Declared content (w/w)

Free amino acids **10%**, Total Nitrogen (N) **5%**, Water-soluble Iron (Fe) **6%**, pH **4**. Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val**.

MICROQUEL HIERRO

Iron corrector complexed with lignosulfonates, suitable for both foliar and root application.

SUITABLE FOR
organic
FARMING

Iron complexed with lignosulfonates ensures quick absorption and assimilation by the plant, providing both preventive and corrective treatment for deficiency symptoms.

The lignosulfonates in the formulation form soluble complexes with iron, enhancing its availability for plant uptake.

Provides a wetting effect that enhances the effectiveness, longevity, and penetration of foliar applications into the plant.

Ideal for high-pH soils, hard water conditions, and crops with high iron requirements such as fruits, vegetables and ornamentals.

Declared content (w/w)

Water-soluble iron (Fe) **6%**, Stability pH range of the chelated fraction **3-12**, Complexing agent **Lignosulfonic acid**.

about the product

CONDITIONERS

A range of fertilizers specially formulated to improve the physical, chemical, and biological properties of the soil. These products enhance soil structure, promoting better water and nutrient retention. As a result, they boost soil fertility and health, supporting stronger crop development.

pH corrector

Efifol Neutrafol pH	75
---------------------	----

Multi-effect soil conditioners

Efisoil Gepasal	76
Efisoil Aminocalcium	77
Efisoil Aminoshoot	78
Efisoil Nitroacid	79
Efisoil Pluviamax 	81

EFIFOL NEUTRAFOL pH

pH regulator, wetting agent,
and antifoaming agent with
a built-in color indicator.

Enhances the stability of active ingredients in the tank mix by providing the ideal pH, improving the compatibility of phytosanitary product mixtures.

Improves the wetting properties of the tank mix solution, enhancing its penetration and assimilation by the crop.

Minimizes foam formation in both nutritional and phytosanitary solutions.

Declared content (w/w)

Total nitrogen (N) **3%**, Phosphorus pentoxide (P₂O₅) soluble in water and neutral ammonium citrate **17%**, Low in biuret.

Packaging

about the product

EFISOIL GEPASAL

Calcium conditioner complexed for root application, ideal for improving saline soils.

Helps improve soil structure by displacing salts that contribute to soil degradation and compaction.

The lignosulfonic acid component enhances calcium stability, increasing its persistence in the soil and improving assimilation and absorption by the plant.

The supplied calcium enhances fruit and tissue consistency, improving the overall quality of the harvest.

Declared content (w/w)

Water-soluble calcium (Ca) **12%**, Complexed fraction stability pH range **3-10**, Complexing agent **Lignosulfonic acid**.

EFISOIL AMINOCALCIUM

Biological activator and saline displacer
with rapidly absorbed calcium,
magnesium and amino acids.

It activates beneficial microorganisms
in the soil, enhancing fertility while also
serving as a soil desalination agent.

Xilacal® enhances the absorption of
calcium and magnesium, ensuring
their complete penetration and
translocation throughout the crop.

Thanks to its aminoacid content, it
enhances crop development during any
stress situation at all stages of the plant's
growth.

Thanks to its aminoacid content, it
enhances crop development during any
stress situation at all stages of the plant's
growth.

Improves crop yields and quality thanks to
the contribution and rapid absorption of
calcium and magnesium.

Declared content (w/w)

Free amino acids **2%**, Total nitrogen (N) **0.5%**, Water-soluble calcium
oxide (CaO) **12%**, Water-soluble magnesium oxide (MgO) **0.5%**, pH **4**.

about the product

EFISOIL AMINOSHOOT

WITH DURAMON

Multi-effect root bulb activator,
soil optimizer for fertigation.

Regenerates and optimizes the physical, chemical and biological properties of the root bulb throughout the crop cycle.

Contains root-stimulating compounds that promote root development and the formation of secondary roots.

Duramon® minimizes nitrogen losses by releasing it gradually, thereby enhancing its efficiency and availability to the crop.

Its acidic formulation prevents clogging caused by precipitates and neutralizes carbonates, improving high-pH hard water for enhanced nutrient availability.

Prevents salinization, compaction, and loss of fertility in high pH soils under fertigation.

Declared content (w/w)

Free amino acids **6%**, Total nitrogen (N) **6%**, Water-soluble sulfur trioxide (SO₃) **14%**, Water-soluble iron (Fe) **3%**, Water-soluble manganese (Mn) **0.15%**, Water-soluble zinc (Zn) **0.01%**, pH **1**, Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val**.

about the product

EFISOIL NITROACID

Nitrogen solution that activates growth with descaling effect.

Its high nitrogen content and soil-unlocking effect stimulate vigorous plant growth.

Optimizes alkaline and calcareous soils by lowering pH, which helps dissolve precipitates and release bound nutrients.

Increases the availability of nutrients locked in the soil, facilitating easier uptake by the crop.

Declared content (w/w)

Total nitrogen (N) **15%**.

Packaging

More information
about the product

PLUVIAMAX

NATURAL WATER SUPPLY

PLUVIAMAX® is an innovative **biostimulant technology**, developed after over 10 years of research, that helps maintain agricultural production with at least **20% less water**.

Formulated from biopolymers with biostimulant properties, **it optimizes water use efficiency** in crops and enhances **plant tolerance to abiotic stress conditions, such as drought**.

PLUVIAMAX® helps **reduce the water footprint** of crops and promotes efficient water use, essential for adapting crops to the challenges of climate change

EFFECT 1

SOIL OPTIMIZATION

It optimizes the physicochemical properties of the soil, improving its structure and increasing porosity.

EFFECT 2

WATER RETENTION

It boosts the soil's water retention capacity, reducing evaporation and ensuring a consistent water supply to crops, while maintaining optimal transpiration.

EFFECT 3

MICROBIOTA ACTIVATION

Biostimulates and activates soil microbiota, enhancing crop protection against low humidity conditions.

EFFECT 4

ROOT DEVELOPMENT

Promotes plant growth by increasing root mass and improving nutrient and water uptake.

PLUVIAMAX® HAS BEEN TESTED, RECOGNIZED, AND CERTIFIED IN THE EUROPEAN UNION FOR ITS PROVEN ABILITY TO ENHANCE THE NATURAL SUPPLY OF WATER FROM SOIL TO CROPS.

EFISOIL PLUVIAMAX

Organic-certified non-microbial biostimulant that enhances the soil's capacity to store water naturally.

Recommended for use with drip irrigation, though it is compatible with other irrigation systems as well.

Suitable for all soil types, including both acidic and alkaline soils.

Ideal for areas with limited water availability, as it enables more efficient use of existing water resources.

The compounds in Pluviamax® promote nutrient mobility and availability in the soil.

By maintaining bulb moisture for longer, it helps prevent the excessive accumulation of harmful salts.

It is a fully biodegradable product, as it contains no synthetic substances for water retention.

Declared content (w/w)

Lignosulfonate (CMC1 Virgin materials and mixtures) **Leonardite** (CMC1 Virgin materials and mixtures) **Potassium hydroxide** (CMC1 Virgin materials and mixtures).

Biocontrol

The quality of our organic matter makes us different

FOR EVERY 6 KG OF MANURE

WE OBTAIN 1 KG
OF OUR ORGANIC MATTER

- 01 Derived from the composting of selected manure (sludge-free).
- 02 Rich in beneficial microorganisms.
- 03 Weed seed-free product.
- 04 Free from phytopathogenic fungi typically found in traditional manures.
- 05 Thorough control of harmful microorganisms and heavy metals.
- 06 Our organic matter is enriched with macro, meso, and microelements.
- 07 A controlled, guaranteed, and certified product.
- 08 Organic matter that is easily assimilated by both soil and crops.

MANUFACTURING AND EXHAUSTIVE SELECTION OF RAW MATERIALS

Control of raw materials

Selected livestock farms and plant sources with high soil organic carbon content.

Initial mixture (sheep manure 80% + M.O. of plant origin 20%)

Homogenize, select and initially mix the different batches (approved customers).

Composting under cover

Duration depending on the type and origin of the manure: For sheep, 3 to 6 months of composting.

Continuous turning

Perform the necessary turnings (minimum 9 turns) to achieve aeration.

Temperature and humidity control

Reach 70°C as a minimum for one hour (disinfection).
Continuous humidity control (min-max) in compost piles (25-35%).

Grinding and screening of organic matter

Particle size unification.

THE FERTINAGRO ORGANIA INDUSTRIAL CENTER HAS OBTAINED THE MOST DEMANDING CERTIFICATIONS IN QUALITY, ENVIRONMENT AND SAFETY

ORGANIA FERTAK

WITH NOVOPHOS-PLB

Organomineral NPK fertilizers with a rhizospheric activator and organic carbon.

Activates the rhizosphere, promoting root development, encouraging the formation of secondary roots, and improving nutrient absorption.

It boosts the biological richness of the soil by activating and multiplying microorganisms, enhancing fertility, and mobilizing locked nutrients.

It enhances water retention capacity and improves soil potential, leading to increased quantity and quality of production.

about the product

ORGANIA CALCIO AZO·N

FORMULATED WITH SUPERBIA

Organic-certified soil conditioner with free amino acids and probiotics for nitrogen fixation and mobilization of locked phosphorus and potassium.

It activates beneficial microorganisms in the soil, enhancing its fertility and revitalizing it to achieve maximum productive performance.

It provides probiotics and prebiotics that promote atmospheric nitrogen fixation and the mobilization of locked phosphorus and potassium.

Contains rhizospheric activators that promote the formation of secondary roots, enhancing nutrient absorption.

It enhances the root's release of natural protective substances with fungistatic and nematostatic effects, boosting the plant's resistance.

The high concentration of peptides and free amino acids provides a biostimulant effect that helps generate energy savings and improve crop establishment.

Declared content (w/w)

Free amino acids **2%**, Total nitrogen (N) **0.8%**, Water-soluble calcium oxide (CaO) **6%**, Water-soluble magnesium oxide (MgO) **2%**, pH **7**, Aminogram: **Ala, Arg, Asp, Glu, Gly, Hyp, His, Ile, Leu, Lys, Met, Phe, Pro, Ser, Tyr, Thr, Trp, Val**.

AGROZERO BON-K

Potassium soap for removing stains and dirt caused by insects, with a strengthening effect on the crop

Dissolves and cleans the honeydew left by insects and mold, preventing disruption of proper crop development.

Thanks to its wetting properties, it improves the coverage and effectiveness of foliar spray solutions.

Ideal for a wide range of crops including fruit trees, citrus trees, and other orchard plants as well as both indoor & outdoor gardening.

Residue-free with zero phytotoxicity risk.

Declared content (w/w)

Soap based on saturated and unsaturated fatty acids and water-soluble potassium **15-30%**.

AGROZERO QUITACTIV

Organic-certified chitosan hydrochloride solution for eliciting the plant's natural defense responses.

Enhances resistance to fungal and bacterial infections, delaying the onset of damage and preventing yield loss.

Thanks to its strong penetration capacity, it can be applied both through foliar spraying and fertigation.

Simultaneous activation of primary and secondary metabolism in crops to promote both growth and protection.

A highly eco-friendly natural product that leaves no residue during harvest, minimizing its environmental impact.

Declared content (w/w)

Chitosan hydrochloride **5%**.

Packaging

1L	5L	20L	200L	1000L
●	●	●	●	●

Recommended doses

CROPS	FOLIAR	FERTIGATION
Berries	2-3 l/ha	3-5 l/ha
Vineyard	2-3 l/ha	3-5 l/ha
Fruit trees	2-3 l/ha	3-5 l/ha
Vegetables	2-3 l/ha	3-5 l/ha
Turf	2-3 l/ha	3-5 l/ha

It is always recommended to apply a spray volume of 1,000 liters of water/ha.
